

TM Pubmaster+ reduces the time and cost of publishing projects by generating outstanding documentation that complies with industry standards for military and commercial publications. This easy-to-use rendering tool is designed to improve your teams overall efficiency and increase individual performance by reducing render times and allowing users to preview PDF views during XML development, streamlining the process of converting XML files into PDF documents.

## Lightweight, Optimized Efficiency

### Unparalleled Speed

Providing rendering times up to 30% faster than the leading competitors. Rendering, on average, an individual work package in less than 5 seconds.

### Excellence in Efficiency

Optimizing your team's performance with a wide array of tools, extensible XML preprocessing for compatibility with any system, and user specific settings allow for individualized viewing preferences.

### Real Time Editing

No need to wait for a publish to render. Enables your team to edit documents in real time with PDF views during XML development.

### Designed for Your Team

User friendly, lightweight software can be installed on each writer's laptop allowing your whole team to rapidly render work, instantly identify problems, and quickly implement solutions.
